

Audiology Services in Noida at Listening Ears

Why Hearing Care Matters

Clear hearing is essential for speech, learning, and everyday communication. If a child or adult struggles to hear properly, it can affect their confidence, studies, and social life. Early testing and care can make a big difference.

What We Offer

At Listening Ears, we provide a full range of audiology services, including:

- Hearing tests for children and adults
- Newborn hearing screening
- Hearing aid trials and fittings
- Speech and listening therapy
- Support for people with hearing loss

Our Child-Friendly Approach

For children, we use play-based and noninvasive hearing tests, making the process comfortable and stress-free. For adults, we offer advanced digital testing and personalized solutions.

Why Choose Listening Ears?

- Experienced audiologists and therapists
- Modern equipment for accurate results
- Personalized care for every age group

Book Your Appointment Today

Take the first step toward better hearing with Listening Ears' professional audiology services.

Do you want me to:

1. **Add Listening Ears' address and phone number (like Dr. Richa blogs)?**
2. **Make it short (under 700 characters) for social media/Google listing?**
3. **Or create both versions? Which one would you like?**

Address: H.A-1 Mango House, Sector 104, Noida 201304

Phone: 092051 94101

IQ Assessment in Noida: Understanding Young Minds at Listening Ears

Why IQ Assessment Matters

Early cognitive evaluation (ideally between ages 4–8) helps identify a child's strengths and areas needing support. At **Listening Ears**, these assessments are designed with care, especially for children with hearing impairments, ensuring that interventions are tailored to match each child's unique learning profile.

What Makes Our Approach Unique

- **Specialist Experience:** Our psychologists and therapists are trained in working with hearing-impaired children, using multiple, standardized tools for reliable insights .
- **Child-Friendly Testing:** We use nonverbal and visual tools such as the Universal Nonverbal Intelligence Test, Mullen Scales, and more, allowing the child to demonstrate their skills in a comfortable format .

Key Cognitive Areas We Evaluate

1. **Verbal Comprehension** – Vocabulary and concept expression
2. **Visual-Spatial Skills** – Mental manipulation of shapes and patterns
3. **Fluid Reasoning** – Solving novel problems accurately
4. **Working Memory** – Holding and using information effectively
5. **Processing Speed** – Quick interpretation of visual tasks

How We Develop Personalized Learning Plans

Assessment results are integrated with educational performance to design individual learning strategies. This helps boost confidence, supports school readiness, and prevents feelings of frustration or anxiety .

Benefits for Your Child

- **Early Insight:** Helps parents and educators make informed academic and developmental decisions
- **Tailored Support:** Enables specific, focused interventions
- **Smooth Transition:** Especially useful during school changes or entry into new learning environments

If you're considering an IQ assessment for your child, our team in Noida is ready to support every step of the way.

What Is Occupational Therapy?

Occupational therapy (OT) is a therapeutic approach that helps individuals develop, recover, or maintain the skills needed for daily living. It focuses on practical activities that improve independence and quality of life.

Why Is Occupational Therapy Important for Children?

Children with developmental delays, sensory issues, or coordination problems often struggle with everyday tasks like writing, buttoning clothes, or paying attention. Occupational therapy uses fun, purposeful activities to help children improve:

- Fine and gross motor skills
- Hand-eye coordination
- Attention and focus
- Sensory integration
- Daily self-care routines

How Adults Benefit from Occupational Therapy

For adults recovering from injury, surgery, or dealing with chronic conditions, occupational therapy offers tools and techniques to regain strength and function. It can help with:

- Post-stroke recovery
- Injury rehabilitation
- Managing arthritis or joint issues
- Memory and cognitive exercises

Get the Right Support at Listening Ears

If you or your child could benefit from occupational therapy, professional support is just a call away.

Understanding Speech Delays in Children – Early Help Matters

Every child develops at their own pace, but when it comes to speech and language, noticeable delays can impact confidence, learning, and social interaction. Speech delays are more common than you might think—and the earlier they're addressed, the better the outcomes.

What Is a Speech Delay?

A speech delay means a child isn't speaking at the expected age. This could involve trouble forming words, limited vocabulary, or difficulty putting sentences together. While some children may simply be “late talkers,” others may need support from a speech-language pathologist.

Signs to Watch For:

- No babbling by 12 months
- Not saying simple words like “mama” or “dada” by 18 months
- Limited vocabulary by age 2
- Difficulty combining two or more words by age 3
- Trouble being understood by others

How Listening Ears Can Help

At **Listening Ears**, we specialize in early identification and intervention for speech delays. Our personalized speech therapy sessions are designed to improve communication skills while building a child's confidence in a supportive environment.

Helping Children Overcome Speech Delays – Why Early Support Matters

Every child grows and learns at their own speed. But when speech and language development is slower than expected, it can affect their learning, social skills, and self-confidence. Speech delays are more common than many realize—and early support can make a big difference.

What Does Speech Delay Mean?

A speech delay happens when a child isn't speaking as much or as clearly as they should for their age. This could mean they struggle to pronounce words, have a small vocabulary, or

find it hard to form sentences. While some kids may simply take longer to start talking, others may benefit from speech therapy.

Common Signs of Speech Delay:

- No babbling or sound-making by 12 months
- Not saying words like “mama” or “dada” by 18 months
- Very few words by age 2
- Difficulty forming short phrases by age 3
- Hard to understand even by family members

How Listening Ears Supports Your Child

At Listening Ears, we focus on identifying speech challenges early and creating personalized therapy plans. Our goal is to help your child speak clearly and confidently through fun, engaging, and caring sessions. We believe every child deserves the chance to express themselves fully.

Every Voice Matters: Empowering Young Minds Through Speech

Some children speak their first words early, while others take more time. But when delays in speech go unaddressed, they can impact a child’s learning, confidence, and social development. At **Listening Ears**, we believe every child deserves the tools to communicate clearly—and the chance to be heard.

What Is Delayed Speech Development?

Speech delays occur when a child doesn’t begin talking or using language as expected for their age. This could mean unclear words, limited vocabulary, or trouble forming phrases. While some children catch up naturally, others need professional guidance to thrive.

Key Indicators Your Child May Need Help

- No babbling or vocal sounds by **1 year**
- Not using basic words like “mama” or “bye” by **18 months**
- Fewer than 50 words by **age 2**
- Difficulty forming basic sentences by **age 3**
- Strangers and even family struggling to understand them

If any of these sound familiar, a speech assessment may be the next right step.

Why Early Action Makes a Difference

Early speech support can dramatically boost your child's ability to:

- Communicate needs and ideas
- Develop social relationships
- Gain confidence in learning environments
- Avoid long-term language or academic challenges

What We Offer at Listening Ears

At **Listening Ears**, we combine warmth, expertise, and evidence-based strategies to support your child's communication journey. Our therapy sessions are:

- **Personalized** to your child's needs and pace
- **Play-based and engaging**, so children learn through fun
- **Led by experienced professionals** in child development and speech therapy

We don't just teach speech—we nurture expression, connection, and confidence.

Is Your Child Not Speaking Yet? Here's What You Need to Know

Every child grows at their own pace. But if your little one is not talking as expected, it might be more than just "taking their time." Delays in speech and language development can affect your child's confidence, learning, and how they connect with others. Listening Ears believes that early attention and the right support can make all the difference.

Understanding Delayed Speech in Children

A speech delay occurs when a child isn't developing spoken language as expected for their age. This might include trouble making sounds, using only a few words, or struggling to put

words together. Some kids catch up naturally, while others benefit from therapy to move forward.

Early Red Flags Parents Shouldn't Ignore

Watch out for these signs that may point to a speech delay:

- No babbling or sound play by 12 months
- Not saying simple words like “mama” or “bye” by 18 months
- Using fewer than 50 words by age 2
- Not putting words together by age 3
- Speech that's hard for others to understand

Why Early Action Is So Important

The earlier you spot a speech delay, the better your child's chances of improvement. With early support, many children catch up quickly and avoid struggles in school and social settings later on.

Support Available at Listening Ears

At **Listening Ears**, we believe every child deserves the chance to communicate confidently. Our team offers:

- Personalized speech therapy plans
- Child-friendly sessions tailored to their pace
- Focus on both verbal and non-verbal communication
- A warm, encouraging environment for learning

We're Here to Support You

If you're unsure about your child's speech development, don't wait. Come visit us or call for a consultation.
